

## Radiation Safety Training

The purpose of this program is to provide University employees with training on the risks associated with using radioactive materials or radiation producing machines and to ensure compliance with regulatory requirements.

Florida State University requires that all users of radioactive material or radiation producing devices on the campus receive radiation safety training, be approved by the Radiation Safety Officer and authorized by the Radiation Safety Committee, and comply with applicable regulatory requirements in order to ensure that all radiation exposure levels are kept "As Low As Reasonably Achievable".

The State of Florida regulatory agency requires those working with, or around, radioactive materials or radiation producing machines to attend a radiation safety course. Training must detail the procedures included in the University's Radiation Safety Manual, as well as compliance with Chapter 64E-5, F.A.C.
